

Get diff forms of power ^{* Elec., nuke, etc.} ~~store it~~
merge it, and store
the merged, for
future use.

March 30, 1980

Above is the definitive ^{formula and} answer to ^{massive} energy-power for the
United States.

Electric power is generated, then stored.

Nuclear power is generated, then stored.

Solar power is generated, then stored.

Etc.

Next, the various forms of stored-up power are blended
into a whole; you might say a "summed-up power,"

and then the "summed-up" power is stored, for
present and future use.

Highest Paid

Hollywood producers, the

highest paid screen star is Steve McQueen, born March 24, 1930. McQueen—whose last film, "Enemy of the People," was so bad it couldn't get a full release in this country—has two additional films scheduled for release this year, "Tom Horn" and "The Hunter."

Reportedly he was paid \$3 million for each, now wants \$5 million before he will even read a script.

"The way it goes with McQueen," explains one producer, "is that you send a check for \$5 million to his agent, Marvin Josephson. After the check clears, you send the script to McQueen. He has script approval, director approval, cameraman approval, leading lady approval, publicists approval, and a couple of other approvals. If he agrees to star in your production, he keeps the check. If he doesn't, the check is returned to you.

"There is such a shortage of bankable film stars that the superstar now rules the roost. Can you imagine Marlon Brando asking for and getting \$2.75 million for 11 days' work on "The Formula"? The way inflation is going, McQueen is almost sure to ask for \$10 million per picture in another five years."

Paramount Pictures

Steve McQueen in film "The Hunter," to be released this year

Note: I don't know... can only central cities and countries with my mind. McQueen gets millions imitating people. Human value. Steve
